## Intellectual Property Rights (IPR) Cell

### Report

The Intellectual Property Rights (IPR) Cell of the college is dedicated to fostering an understanding and appreciation of IPR among the institution's stakeholders. Its core objective is to promote awareness and education on Intellectual Property Rights among the college's faculty and students.

This cell was formally established following the resolution of the college council meeting on 12th August 2021. Dr. Balakrishna B M, an Associate Professor of Kannada, was appointed as its Convener.

The IPR Cell's responsibilities extend beyond mere awareness; it plays a pivotal role in providing IPR guidance to teachers, research scholars, and students. Additionally, the cell oversees the legal and financial aspects of research paper documentation. It is observed that numerous intellectual assets remain unprotected, primarily due to a gap in understanding the significance of IPR. Addressing this, the IPR Cell imparts essential knowledge on the subject and assists in the process of filing patent applications, along with other IPR-related matters.

The operation of the IPR Cell is under the purview of the college's Research Committee.

The objectives and activities of the Cell are as follows:

- To protect the intellectual property rights generated by faculty and students of Government College Kasaragod.
- To lay down fair and transparent administrative processes for ownership control.
- To promote constant awareness about intellectual property.
- To encourage faculty members to do patent searches in-house to fine tune their research.
- To guide and advise researchers on how to obtain and sustain patents, and help them approach patent information centres (PICs).
- To organize workshops on intellectual property, including APIs, fundamental rights, copyright, the Right to Information Act, patent rights, and plagiarism.

Name and Signature of the Principal  
Dr. Ananthapadmanabha A.L.

The Cell will achieve these objectives by working closely with faculty, students, and other stakeholders. The Cell will also collaborate with national and international organizations to promote awareness of intellectual property and to support research and innovation.

The IPR Cell of GCK Kasaragod will provide guidance and assistance to faculty members and students in the following areas:

- Patentability assessment
- Application for various intellectual property rights (IPRs), such as inventions, designs, and other creative works
- Advice and guidance on filing patents or other IPR applications
- Obtaining internal approval from the Principal and the HOD for patent applications
- Maintaining confidentiality of invention patents, trademarks, and other documents
- Drafting patent applications and filling out relevant forms
- Corresponding with the authority/agency and the inventors on IP matters
- Expediting the furnishing of information for timely actions
- Informing the IPR Cell of any further development in the related R&D work

The IPR Cell will work closely with faculty members and students to ensure that their intellectual property is protected and that they are able to obtain the full benefits of their research and development.

Organized by  
Internal Quality Assurance Cell (IQAC)

Name and Signature of the Principal  
**Dr. Ananthapadmanabha.A.L**

In his talk, Mr. Ulahannan discussed the basics of IPR, the different types of IPR, and their importance in the digital age. He also spoke about the challenges of protecting IPR in the online world and the steps that individuals and organizations can take to protect their intellectual property.

Mr. Ulahannan's talk was informative and engaging, and it was well-received by the audience. The participants were particularly interested in learning about the latest developments in IPR law and the best practices for protecting their intellectual property in the digital age.

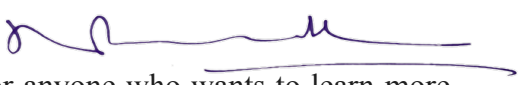

Here are some of the key takeaways from Mr. Ulahannan's talk:

- IPR is a set of legal rights that protect the creations of the mind. It includes patents, trademarks, copyrights, and industrial designs.
- IPR is important because it encourages innovation and creativity. It also provides creators with the exclusive right to use, exploit, and profit from their creations.
- The digital age has created new challenges for IPR protection. For example, it is easier to copy and distribute digital content than it is to copy and distribute physical content. This has led to an increase in piracy and copyright infringement.
- There are a number of things that individuals and organizations can do to protect their IPR in the digital age. These include:
  - Registering their IPR with the appropriate authorities.
  - Using technological measures to protect their digital content, such as encryption and watermarking.
  - Monitoring the internet for unauthorized use of their IPR.
  - Taking legal action against infringers.

Students and faculties of both the colleges participated in the talk.

Overall, Mr. Ulahannan's talk was a valuable resource for anyone who wants to learn more about IPR and how to protect it in the digital age.
